

Frequently Asked Questions (FAQ)

General

Q: What is this project?

Flexible open-source ESP32-based Audio Message Player for playing TTS, TTM, MP3 files, and live radio streams with WebUI, MQTT, FTP server, and GPIO-triggered actions. Designed for smart home environments with MQTT-based remote control and automation support. With the addition of a PIR sensor or button, it can operate autonomously as an eDog or AudioBox without a smart home system. Any movement or button press will be reported to a smart home system via MQTT.

Installation

Q: How do I install the firmware?

1. Open Web Flasher: <https://nmaciol.github.io/ESP32-Audio-Message-Player-firmware/>
2. Flash firmware to ESP32
3. Extract sd-card-content.zip to FAT32 SD card
4. Configure app.json
5. Reboot device

Q: OTA updates?

No OTA support. Use Web Flasher.

Features

Q: WebUI?

Yes, configurable in settings.

Q: Audio playback?

Supports MP3 and internet radio streams.

Controls:

Key3 stop
Key4 GPIO trigger
Key5 volume down
Key6 volume up
Key1 reboot
MQTT + WebUI control

Troubleshooting

Startup errors:

Error 1: Config missing → SD card format / app.json missing
Error 2: JSON invalid → fix app.json
Error 3: Wi-Fi issue → check credentials + 2.4GHz

WebUI not opening:

Check app.json or hold Key4 10s

Audio not playing:

Check MP3 exists + 44100 Hz

FTP issues:

Enable FTP in app.json + improve Wi-Fi

Streaming issues:

Network instability or router overload
